

What we're building today

Quick recap of what happened last time, then exactly what changes today.

LAST TIME

What already happened

We asked Rafiq: "What's our leave policy?"

It guessed, or gave up. Rafiq only ever answered from what the model already knew — it had no way to look anything up.

TODAY

What we're building

We give Rafiq a private knowledge base, and teach it to **look something up before answering** instead of guessing. Same question from last time gets asked again at the end — this time it should actually get answered.

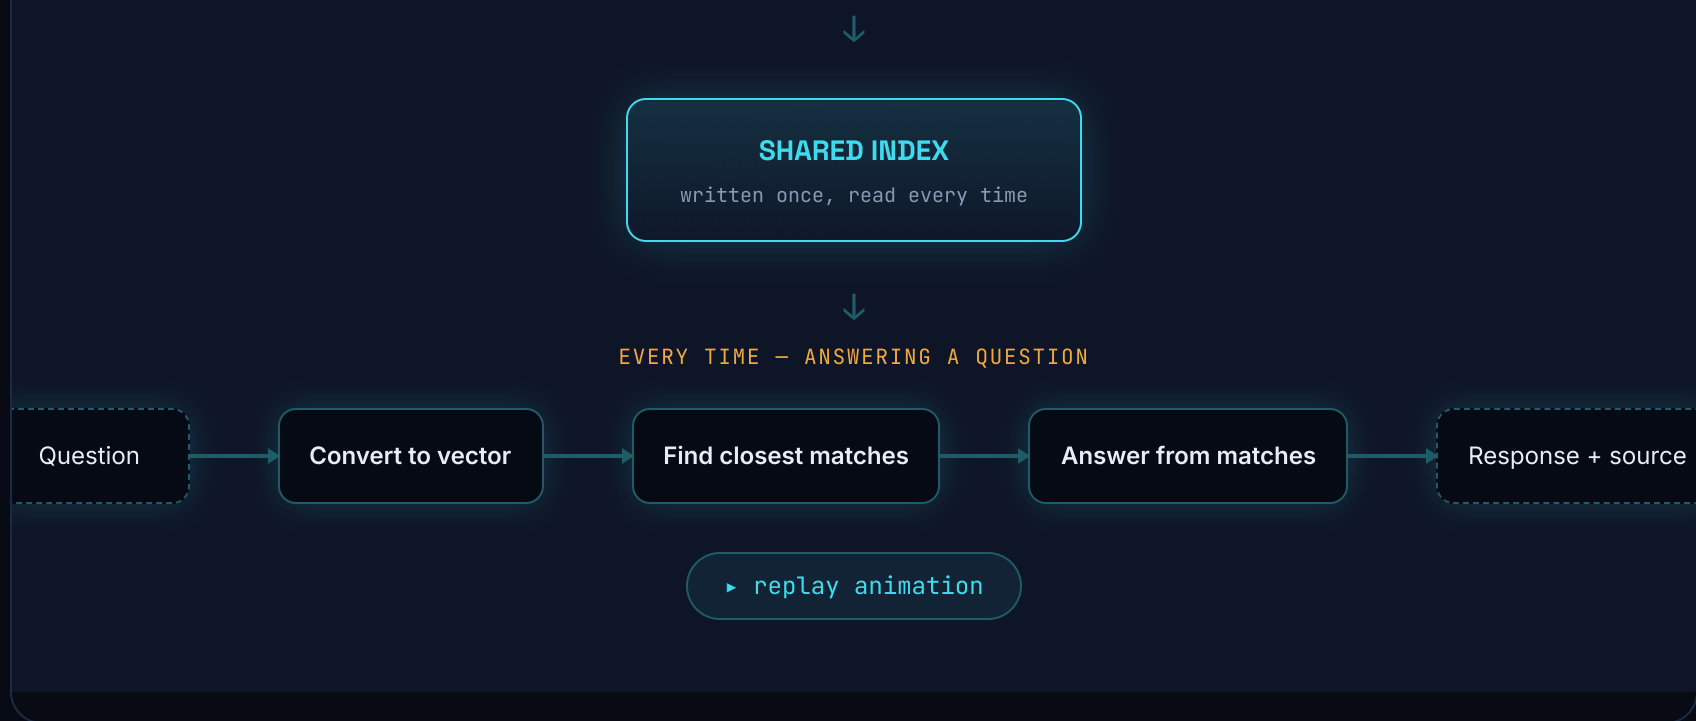

ONCE — PREPARING THE KNOWLEDGE BASE

Write to index

One rule underneath all of it: Rafiq answers from what it finds — **or**
admits it doesn't know. Never a guess dressed up as fact.
